

Cabasse has launched a new sound profile, GEN2, available from the Cabasse StreamCONTROL application to further enhance the acoustics of its two popular high-resolution active connected loudspeakers, both of which have already been distinguished with the Diapason d'Or award. These acoustic enhancements are now available for both iOS and Android and bring users greater listening pleasure.

One of the advantages of connected technology is the ability to keep products evolving and constantly improving. Driven by excellence and in pursuit of the perfect sound for each of its speakers, Cabasse has integrated the GEN2 sound optimisation, via its StreamCONTROL application directly into its on-board software, thus benefiting all users who already own these loudspeakers. By selecting the new GEN2 profile from the application (resulting from research of the Cabasse engineering team), users will discover a brand-new sound signature.

Technical characteristics of GEN2:

- Optimisation of the low-frequency dynamics: The signal processing of the new Cabasse DSP reinforces this already popular quality of THE PEARL and THE PEARL AKOYA.
- Optimised automatic room correction to further preserve the overall balance of the loudspeaker when auto-calibration is activated.
- Dynamic Fidelity Enhancer: THE PEARL and THE PEARL AKOYA adapt dynamically to the listening volume in order to offer the most faithful sound reproduction.
- Safety and balance at very high volumes: When listening to THE PEARL or THE PEARL AKOYA at maximum volume, the sound pressure limiter protects your speakers and eardrums as much as possible while respecting the overall balance and source dynamics.

The GEN2 profile is now available via the Cabasse StreamCONTROL application for iOS and Android.
